CONCLUSION

Chapter One

Introduction

Office 365

Microsoft Office 365 is a cloud-based subscription service that provides access to various applications and services to enhance productivity and collaboration in different settings. Some of the benefits of using Microsoft Office 365 are:

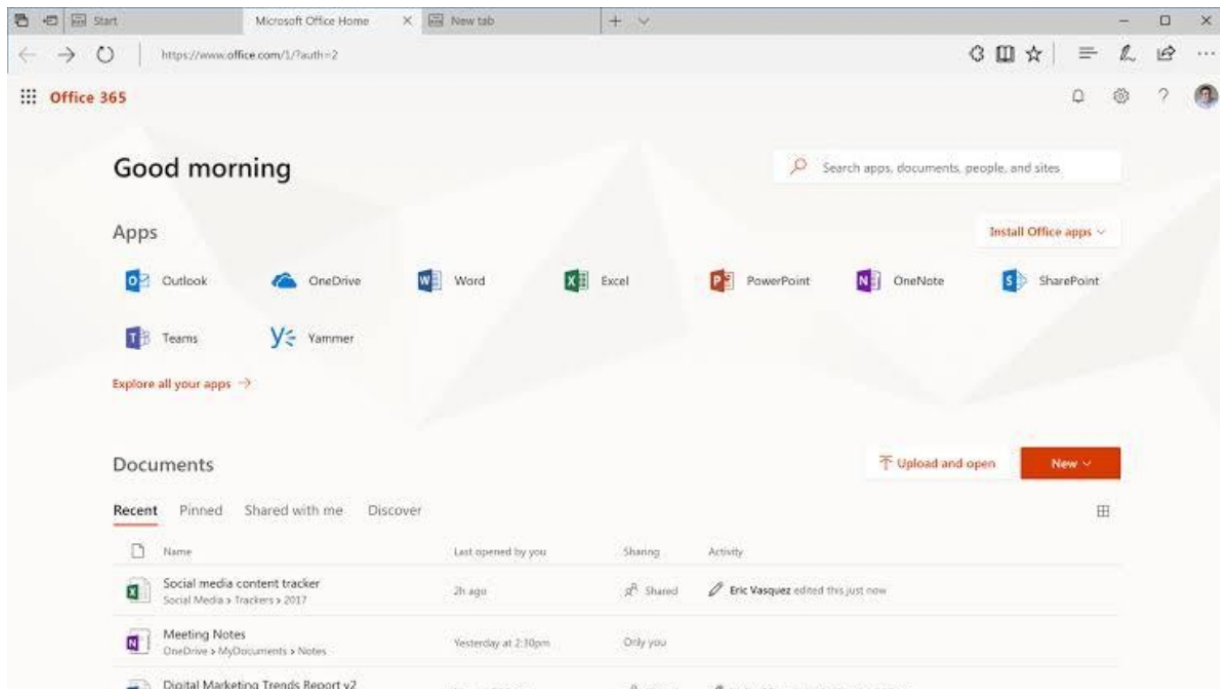

- It allows users to work from anywhere, anytime, and on any device, as long as they have an internet connection and a valid subscription.
- It offers a range of applications and services that can suit different needs and preferences, such as Word, Excel, PowerPoint, Outlook, OneNote, OneDrive, Teams, SharePoint, and more.
- It enables users to collaborate and communicate with others in real-time, using features such as co-authoring, chat, video conferencing, and file sharing.
- It ensures security and compliance, using advanced encryption, multi-factor authentication, and data loss prevention to protect user data and privacy.
- It provides automatic updates and backups, so users always have the latest versions of the applications and services, and their data is always safe and accessible.

Getting Started

To get started with Microsoft Office 365, you need to follow these steps:

1. First, launch the app. When you do, you will be ushered into the app's Home screen.
2. At the Home Screen, click on the Signup tab to sign up for an Office 365 account if you don't already have one. Having an account synchronizes your work across all the apps. You can choose from different plans depending on your needs and budget. You can also get a free trial for one month.
3. If you already have an account, sign in with your account. You can access all your Office apps and services using the same account. To sign in, enter your email address and password when prompted.
4. Explore and use Office apps and services. You can create, edit, and share documents, spreadsheets, presentations, emails, notes, and more with Office apps. You can also use online services such as OneDrive, SharePoint, and Teams to store, sync, and collaborate with others.

The Home Screen

The home screen is the first thing you see when you access Microsoft 365. It gives you quick and easy access to everything you need to use the app.

The Microsoft 365 home screen uses a card-based interface, where each primary page within the admin center has its card. A card is a rectangular tile that summarizes information or actions related to a specific topic or function. For example, the Dashboard card shows you an overview of your Microsoft 365 environment, such as the number of active users, licenses, devices, etc. The User card lets you manage user accounts, groups, roles, and settings. The Billing card lets you view and pay your invoices, change your subscription plan, and add or remove licenses.

You can see all the available cards on the home screen by scrolling horizontally or vertically. You can also customize the home screen by adding, removing, resizing, and rearranging the cards according to your preferences and needs. To do so, you can use the Edit button on the top right corner of the home screen or right-click on any card and select the appropriate option.

How to Use the Microsoft 365 Homescreen

The Microsoft 365 home screen is designed to help you get things done faster and easier. Here are some tips on how to use the home screen effectively:

- Explore the different cards and see what they offer. You can click on any card to open its full page to find more details and options. For example, if you click on the Settings card, you can access various settings for your Microsoft 365 organization, such as domains, security, privacy, compliance, etc.
- Check for updates and notifications on the home screen. Some cards may display a badge or a banner to indicate something new or essential for you to see or do. For example, the Dashboard card may show you a banner that says "Welcome to Microsoft 365" if you are a new user or a badge that says "1 alert" if an issue requires your attention.
- Access support and feedback from the home screen. If you need help or have a question, use the Help button on the top right corner of the home screen or the Support card in the bottom left corner. You can also use the Feedback button on the bottom right corner of the home screen to share your opinions and suggestions with Microsoft.

Microsoft 365 2024 Office apps

The Microsoft Office 365 applications include:

- **Word:** A word processor that allows you to create, edit, and share documents.
- **Excel:** A spreadsheet application that lets you perform calculations, analyze data, and create charts and graphs.
- **PowerPoint:** A presentation application that enables you to create, edit, and deliver slideshows.
- **Outlook:** An email and calendar application that helps you manage your communications and schedule.

- **OneNote:** A note-taking application that captures, organizes, and syncs your notes across devices.
- **OneDrive:** A cloud storage service that gives you access to your files from anywhere and syncs them with your devices.
- **Teams:** A collaboration and communication platform that allows you to chat, call, and video conference with your colleagues and partners.
- **SharePoint:** A web-based platform that enables you to create, manage, and share sites, documents, and content.
- **Access:** A database application that allows you to create, edit, and query relational databases.
- **Publisher:** A desktop publishing application that helps you create, design, and print professional-quality publications.

Chapter Two

Microsoft Word

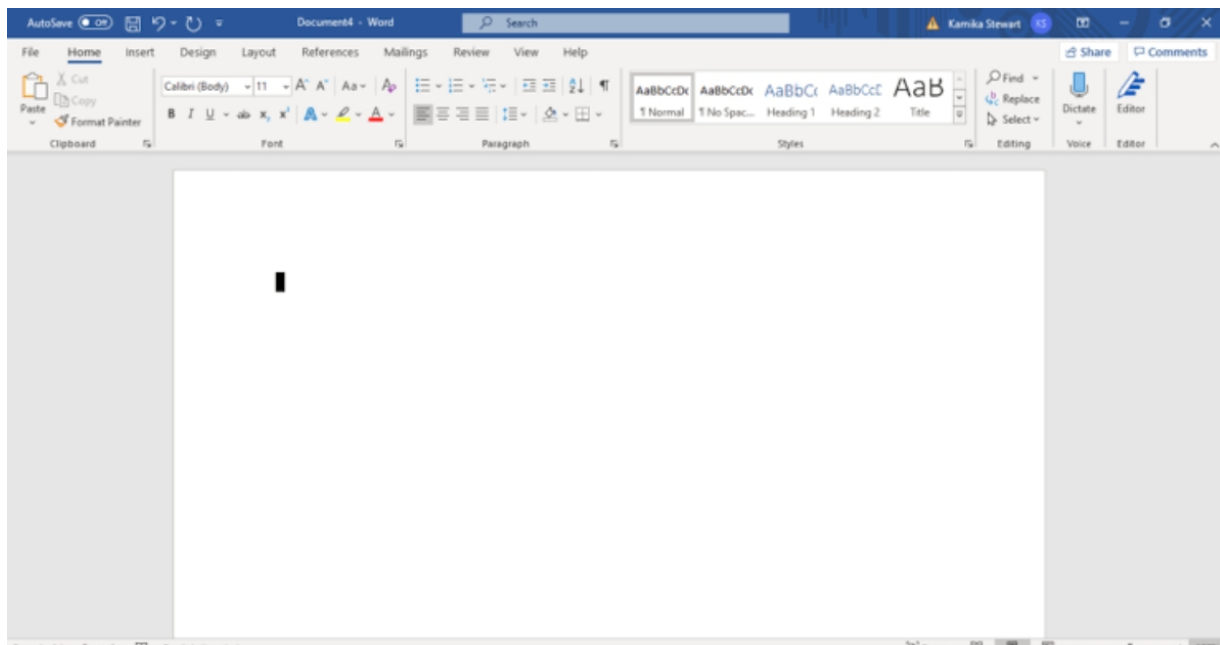

Microsoft Word is a word processor that allows you to create and share engaging documents. It is useful for many purposes, such as writing essays, reports, letters, resumes, newsletters, etc. You can also use Microsoft Word to design and format your documents with various features.

Creating Word Document

To create a document in Microsoft Word, follow these steps:

- **Open Microsoft Word on your device.** You can either click the Word icon on your desktop, taskbar or start menu or search for Word in the search box.
- **Choose how you want to start your document.** You can either create a blank document or use a template that has a predefined layout, style, and format.
- **To create a blank document,** click on the Blank document option on the left side of the screen. To use a template, click on the More Templates option on the right side of the screen and browse through the categories or search for a specific template.

The Word Interface

The interface of Word consists of several elements that provide access to the features and functions.

1. The Start Screen

When you open Word for the first time, you will see the Start Screen, which gives you several options to start working on your document. You can:

- Start a new blank document by clicking on the Blank document icon.
- Start with a template by choosing one from the list or clicking More Templates for more options.
- Access your recently edited documents by clicking on one of the documents from the list or clicking on More Documents to see more options.
- Access your pinned documents by clicking on the Pinned tab and choosing one of the documents from the list.
- Access your shared documents by clicking on the Shared with Me tab and choosing one of the documents from the list.
- Open a document from your computer or cloud by clicking on the Open tab and browsing to the document's location.

You can access the Start Screen anytime by clicking the File tab and choosing New or Open.

2. The Quick Access Toolbar

The Quick Access Toolbar is a small toolbar that appears at the top left corner of the Word window. It contains some of the most commonly used commands, such as Save, Undo, Redo, and Print. You can customize the Quick Access Toolbar by adding or removing commands you use frequently. To do that, click the drop-down arrow next to the toolbar and choose the commands you want to add or remove. You can also move the Quick Access Toolbar below the Ribbon by clicking the drop-down arrow and choosing Show Below the Ribbon.

3. The Title Bar

The Title Bar is the horizontal bar at the top of the Word window. It displays the current document's name and the program's name. It also contains some buttons that allow you to minimize, maximize, restore, or close the Word window.

4. The Ribbon

The Ribbon is the main toolbar that appears below the Title Bar. It contains different tabs that group related commands and features. The tabs are:

- **Home:** This tab contains the general features you need to work with your document, such as formatting, editing, copying, pasting, and finding and replacing text.
- **Insert:** This tab allows you to insert various elements into your document, such as pages, tables, pictures, shapes, charts, and links.
- **Draw:** This tab provides basic tools to draw anything on your document, such as pens, pencils, highlighters, erasers, and rulers. You can also use this tab to convert your drawings into shapes or text.
- **Design:** This tab enables you to change the theme, style, and feeling of your document, such as colors, fonts, effects, and borders.
- **Layout:** This tab helps you to adjust the layout and page setup of your document, such as margins, orientation, size, columns, and breaks.
- **References:** This tab assists you in adding references and citations to your document, such as tables of contents, footnotes, endnotes, bibliographies, and captions.
- **Mailings:** This tab allows you to create and print envelopes and labels and to perform mail merge tasks, such as creating personalized letters, emails, or labels for a list of recipients.
- **Review:** This tab lets you review and proofread your document, such as checking spelling and grammar, adding comments, tracking changes, and comparing documents.
- **View:** This tab lets you change the view and appearance of your document, such as zooming in or out, splitting the window, showing or hiding the ruler, gridlines, or navigation pane, and switching between different views, such as print layout, web layout, outline, or draft.

Some tabs, such as Draw, Mailings, and Review, may not appear by default, depending on your version of Word and your settings. You can enable or

disable these tabs by clicking on the File tab, choosing Options, and selecting Customize Ribbon.

Some other tabs, such as Table Tools, Picture Tools, and Chart Tools, may appear only when you select a specific element in your document, such as a table, a picture, or a chart. These tabs provide additional features and options for working with the selected element

5. The Tell Me Feature

The Tell Me feature is a helpful tool that helps you find the features and commands you need in Word. It is at the right end of the Ribbon, next to the View tab. It has a text box with a light bulb icon and the words Tell me what you want to do. To use this feature, type what you want in the text box, such as insert a table, change the font size, or print the document. Word will then suggest some relevant commands or features that match your query. You can click on the suggested command or feature to apply it to your document or click on the More button to see more options.

6. The Document Area

The Document Area is the large area below the Ribbon where you can type and edit your document. It shows the content of your document as it will appear on the printed page. You can use the mouse or the keyboard to navigate and select text in the Document Area. You can also use the scroll bars on the right and bottom sides of the Document Area to move up, down, left, or right in your document.

7. The Insertion Point

The Insertion Point is the blinking vertical line indicating where the text you type will appear in the Document Area. You can move the Insertion Point by clicking on the desired location with the mouse or using the arrow keys on the keyboard. You can also use the Home, End, Page Up, and Page Down keys to move the Insertion Point to the beginning or end of a line or the previous or next page.

8. The Status Bar

The Status Bar is the horizontal bar at the bottom of the Word window. It displays some information and options related to your document, such as the page number, the word count, the zoom level, and the view mode. You can customize the Status Bar by right-clicking on it and choosing the items you want to display or hide.

9. The View Buttons

The View Buttons are located at the right end of the Status Bar. They allow you to switch between different views of your document, such as:

- **Print Layout:** This view shows how your document will look when printed. It is the default view in Word.
- **Web Layout:** This view shows how your document will look on a web browser.
- **Read Mode:** This view optimizes your document for reading on the screen. It hides the Ribbon and the Status Bar and shows the document in a column layout with larger fonts and less clutter.
- **Outline:** This view shows the structure and hierarchy of your document. It helps organize and outline your document, especially for long and complex documents.
- **Draft:** This view shows your document in a simple and basic layout. It is useful for editing and formatting your document, especially for documents that contain a lot of text.

10.

The Zoom Slider

The Zoom Slider is located at the right end of the Status Bar, next to the View Buttons. It allows you to zoom in or out of your document, which means changing the text size and images on the screen. You can drag the slider to the left or right to zoom out or in or click the plus or minus buttons to zoom in or out by 10%. You can also click on the percentage number to open the Zoom dialog box, where you can choose a specific zoom level or fit the document into the window.

Formatting Tools

The formatting tools in Microsoft Word are:

- **Font:** This tool allows you to change the font type, size, color, style, and effects of your text. To use this tool, select the text you want to format and click on the Font dialogue box launcher on the Home tab. You can also use the shortcut keys Ctrl+B for bold, Ctrl+I for italic, Ctrl+U for underline, and Ctrl+Shift+< or Ctrl+Shift+> for changing the font size.
- **Paragraph:** This tool allows you to change the alignment, indentation, spacing, and bullets or numbering of your paragraphs. To use this tool, select the paragraph or paragraphs you want to format and click on the Paragraph dialog box launcher on the Home tab. You can also use the shortcut keys Ctrl+L for left alignment, Ctrl+R for right alignment, Ctrl+E for center alignment, Ctrl+J for justify alignment, Ctrl+M for increasing indentation, Ctrl+Shift+M for decreasing indentation, Ctrl+1 for single spacing, Ctrl+2 for double spacing, and Ctrl+5 for 1.5 spacing.
- **Styles:** This tool allows you to apply predefined formatting sets to your text, such as headings, titles, quotes, etc. To use this tool, select the text you want to format and click on the Styles gallery on the Home tab. You can also use the shortcut keys Alt+Ctrl+1 for heading 1, Alt+Ctrl+2 for heading 2, Alt+Ctrl+3 for heading 3, etc.
- **Page Layout:** This tool allows you to change the margins, orientation, size, columns, breaks, and background of your pages. To use this tool, click on the Page Layout tab and choose the options you want from the Page Setup, Page Background, and Page Columns groups. You can also use the shortcut keys Alt+P+M for margins, Alt+P+O for orientation, Alt+P+S for size, Alt+P+C for columns, Alt+P+B for breaks, and Alt+P+G for background.
- **Insert:** This tool allows you to insert various elements into your document, such as tables, pictures, shapes, charts, symbols, headers, footers, page numbers, etc. To use this tool, click on the Insert tab and choose the options you want from the Tables, Illustrations, Add-ins, Media, Links, Text, and Symbols groups. You can also use the shortcut keys Alt+N+T for table, Alt+N+P for picture, Alt+N+SH

for shape, Alt+N+C for chart, Alt+N+U for symbol, Alt+N+H for header, Alt+N+F for footer, Alt+N+NU for page number, etc.

- **References:** This tool allows you to add citations, bibliographies, footnotes, endnotes, indexes, tables of contents, captions, and cross-references to your document. To use this tool, click on the References tab and choose the options you want from the Table of Contents, Footnotes, Citations & Bibliography, Captions, Index, and Table of Authorities groups. You can also use the shortcut keys Alt+S+T for table of contents, Alt+S+F for footnote, Alt+S+E for endnote, Alt+S+I for insert citation, Alt+S+B for bibliography, Alt+S+A for add caption, Alt+S+X for insert index, Alt+S+G for mark citation, etc.
- **Mailings:** This tool allows you to create and print envelopes, labels, letters, and emails for multiple recipients using mail merge. To use this tool, click on the Mailings tab and choose the options you want from the Create, Start Mail Merge, Write & Insert Fields, Preview Results, and Finish groups. You can also use the shortcut keys Alt+M+E for envelopes, Alt+M+L for labels, Alt+M+S for start mail merge, Alt+M+H for highlight merge fields, Alt+M+P for preview results, Alt+M+F for finish & merge, etc.
- **Review:** This tool allows you to check the spelling, grammar, and readability of your document, as well as add comments, track changes, compare documents, and protect your document. To use this tool, click on the Review tab and choose the options you want from the Proofing, Language, Comments, Tracking, Changes, Compare, and Protect groups. You can also use the shortcut keys F7 for spelling & grammar, Alt+R+L for language, Alt+R+C for new comment, Alt+R+T for track changes, Alt+R+A for accept change, Alt+R+R for reject change, Alt+R+M for compare, Alt+R+P for protect document, etc.
- **View:** This tool allows you to change how you see your document, such as zooming, splitting, arranging, and switching windows, as well as showing or hiding the ruler, gridlines, navigation pane, and document map. To use this tool, click on the View tab and choose the options you want from the Document Views, Show, Zoom, Window, and Macros groups. You can also use the shortcut keys Alt+W+Q for zoom, Alt+W+S for split, Alt+W+R for ruler,

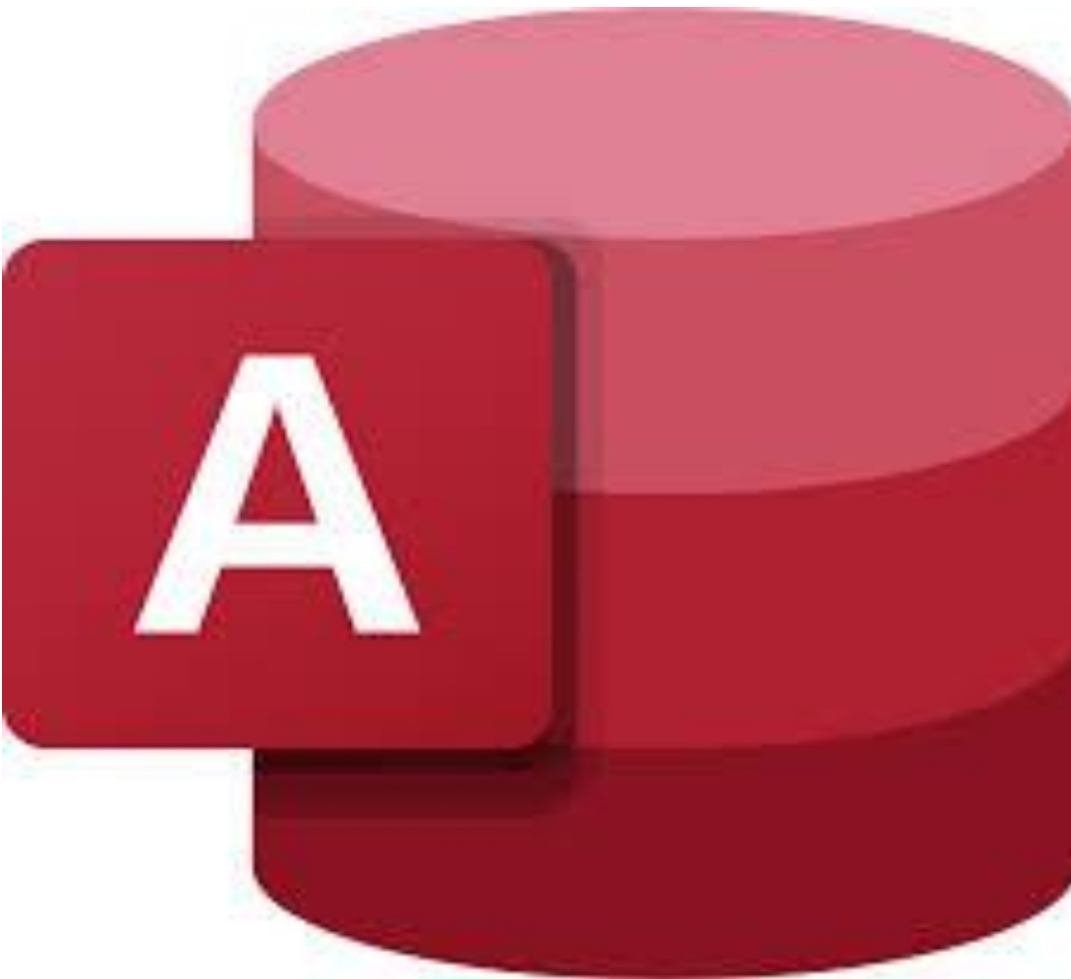

Alt+W+G for gridlines, Alt+W+N for navigation pane, Alt+W+D for document map, Alt+W+W for switch windows, Alt+W+M for macros, etc.

Other Actions

- **To start a new document**, click the File tab and select New. You can choose from various templates or start with a blank document.
- **To open an existing document**, click the File tab and select Open. You can browse your computer or cloud storage for the document you want to open.
- **To save a document**, click the File tab and select Save. You can also use the keyboard shortcut Ctrl+S (Windows) or Command+S (Mac). If you are saving the document for the first time, you will need to enter a name and a location for the document.
- **To print your document**, click the File tab and select Print. You can adjust the print settings, such as the number of copies, the orientation, the margins, and the paper size. You can also preview your document before printing it.

Chapter Three

Microsoft Access

Microsoft Access is a database management program that allows you to store, organize, and manipulate data in various ways. You can use Access to create tables, forms, queries, and reports for your data.

What is a Database?

A database is a collection of organized and structured data so you can easily access, analyze, and update it. A database can store different data types,

such as text, numbers, dates, images, or files. A database can also have multiple tables, like separate spreadsheets storing related data.

For example, you want to create a database for a small library. You might have a table for books, a table for authors, and a table for borrowers. Each table would have fields, like columns in a spreadsheet, that store specific information about each record, like rows in a spreadsheet.

How to Create a Database in Access

To create a new database in Access, you can either use a blank database or a template. A blank database gives you more flexibility and control over your design, while a template provides a ready-made structure and sample data.

To create a blank database, follow these steps:

- Open Access and click on Blank Database.
- Enter a name for your database and choose a location to save it.
- Click on Create.

To create a database from a template, follow these steps:

- Open Access and click on New.
- Choose a category and select a template that suits your needs.
- Enter a name for your database and choose a location to save it.
- Click on Create.

How to Add Data to a Table

You can type, copy and paste, import, or link data from another source to add data to a table. You can also rename, move, or delete fields and records.

To type data in a table, follow these steps:

- Open the table in Datasheet View by double-clicking on it in the Navigation Pane.
- Click on the cell where you want to enter data and start typing.
- Press Tab or Enter to move to the next cell or record.
- To add a new record, click on the New Record button at the bottom of the table or press Ctrl + +.

To copy and paste data in a table, follow these steps:

- Open the table in Datasheet View by double-clicking on it in the Navigation Pane.
- Select the cells or records you want to copy and press Ctrl + C or right-click and choose Copy.
- Click on the cell where you want to paste the data and press Ctrl + V or right-click and choose Paste.

To import data in a table, follow these steps:

- Open the table in Datasheet View by double-clicking on it in the Navigation Pane.
- Click on the External Data tab and choose the data source, such as Excel, Text File, or Access.
- Follow the steps in the Import Wizard to select the File, specify the options, and match the fields.
- Click on Finish.

To link data in a table, follow these steps:

- Open the table in Datasheet View by double-clicking on it in the Navigation Pane.
- Click on the External Data tab and choose the data source, such as Excel, Text File, or Access.
- Follow the steps in the Link Wizard to select the File, specify the options, and match the fields.
- Click on Finish.

To rename a field in a table, follow these steps:

- Open the table in Design View by right-clicking on it in the Navigation Pane and choosing Design View.
- Click on the field name you want to change and type a new name in the Field Name box.
- Press Enter or click on another field to save the change.

To move a field in a table, follow these steps:

- Open the table in Design View by right-clicking on it in the Navigation Pane and choosing Design View.
- Click on the field name you want to move and drag it to a new position in the Field List.
- Release the mouse button to drop the field.

To delete a field in a table, follow these steps:

- Open the table in Design View by right-clicking on it in the Navigation Pane and choosing Design View.
- Click on the field name you want to delete, press Delete, or right-click and choose Delete Rows.
- Click on Yes to confirm the deletion.

To delete a record in a table, follow these steps:

- Open the table in Datasheet View by double-clicking on it in the Navigation Pane.
- Click on the record selector, which is the gray box to the left of the record, and press Delete or right-click and choose Delete Record.
- Click on Yes to confirm the deletion.

How to Set Data Types, Validation Rules, and Input Masks

You can set data types, validation rules, and input masks for your fields to ensure data accuracy and consistency. Data types specify the kind of data that a field can store, such as text, number, date, or currency. Validation rules define a field's criteria, such as a range, format, or list of values. Input masks provide a template for entering data, such as a phone number, a postal code, or a social security number.

To set data types, validation rules, and input masks for your fields, follow these steps:

- Open the table in Design View by right-clicking on it in the Navigation Pane and choosing Design View.
- Click on the field you want to modify and choose a data type from the Data Type drop-down list in the Field Properties section.
- To set a validation rule, enter an expression in the Validation Rule box and a message in the Validation Text box. For example, to limit the values of a field to between 1 and 10, you can enter `>=1 And <=10` in the Validation Rule box and `Enter a value between 1 and 10` in the Validation Text box.
- To set an input mask, click on the ... button next to the Input Mask box and follow the steps in the Input Mask Wizard to select or create a mask. For example, to create a mask for a phone number, you can choose the `(999) 000-0000` mask from the list and click Next.

How to Set Table Relationships

To establish connections between your tables, you can set table relationships, such as one-to-one, one-to-many, or many-to-many. Table relationships help avoid data duplication, ensure data consistency, and enable data analysis. For example, in a library database, you might have a one-to-many relationship between the authors table and the books table,

meaning that one author can write many books, but each book can have only one author.

To set table relationships, follow these steps:

- Click on the Database Tools tab and choose Relationships.
- If you have not added any tables to the Relationships window, click Show Table and select the tables you want to relate. Click on Add and then Close.
- To create a relationship, drag the field you want to relate from one table to the corresponding field in another. For example, to create a relationship between the author's table and the books table, drag the AuthorID field from the author's table to the AuthorID field in the books table.
- An Edit Relationships dialog box will appear. You can choose the type of relationship, such as one-to-one, one-to-many, or many-to-many, from the Type drop-down list. You can also check the Enforce Referential Integrity box to prevent invalid data entry or deletion. You can also check the Cascade Update Related Fields box to update the related fields automatically when you change the primary key value. You can also check the Cascade Delete Related Records box to delete the related records automatically when you delete the primary key value.
- Click on Create to establish the relationship. You will see a line connecting the two tables, with a symbol indicating the type of relationship, such as 1 for one-to-one, infinity for one-to-many, or infinity-infinity for many-to-many.
- To edit or delete a relationship, right-click on the line and choose Edit Relationship or Delete.

How to Create Queries

You can create queries to filter, sort, group, calculate, or modify data in your tables. Queries are like questions you ask your database; the results are displayed in a datasheet. You can also use queries to create new tables and update or delete existing data.

To create a query, follow these steps:

- Click on the Create tab and choose the type of query you want to create, such as Select Query, Crosstab Query, Make Table Query, Update Query, or Delete Query.
- If you choose Select Query, the Query Design window will open. You can add the tables or queries you want to use as the data source by clicking Show Table and selecting them. Click on Add and then Close.
- To add fields to the query, drag them from the Field List to the Design Grid. You can also double-click on the fields or type them in the Field row.
- To specify criteria for the query, enter them in the Criteria row under the corresponding fields. You can refine your criteria by using expressions, functions, operators, or parameters. For example, to filter the books by genre, you can enter ``="Science Fiction"``` in the Criteria row under the Genre field.
- Choose Ascending or Descending from the Sort row under the corresponding fields to sort the query results. For example, you can choose Ascending from the Sort row under the Title field to sort the books by title.
- To run the query, click the Run button on the Design tab or press F5. You will see the query results in a datasheet.
- To save the query, click the Save button on the Quick Access Toolbar or press Ctrl + S. Enter a name for the query and click OK. You will see the query in the Navigation Pane.

How to Create Forms

You can create forms to view, add, edit, or delete data in your tables. Forms are like windows that display your data in a user-friendly and interactive way. You can use different types of controls, such as text boxes, combo boxes, list boxes, buttons, or labels to enhance your forms. You can also use form properties, events, and macros to customize your forms.

To create a form, follow these steps:

- Click on the Create tab and choose the form you want to create, such as Form, Form Design, Blank Form, Multiple Items, or Split Form.
- If you choose Form, Access will create a form based on the table or query you selected or opened. You can modify the form layout and design using the tools on the Form Layout and Form Design tabs.
- If you choose Form Design, Access will open a blank form in Design View. You can add the tables or queries you want to use as the data source by clicking Property Sheet and choosing them from the Record Source drop-down list. You can also add fields to the form by dragging them from the Field List to the form. You can also add controls to the form using the Design tab tools.
- If you choose Blank Form, Access will open a blank form in Layout View. You can add fields to the form by dragging them from the Field List to the form. You can also add controls to the form using the Design tab tools.
- If you choose Multiple Items, Access will create a form that displays multiple records in a datasheet-like format. You can modify the form layout and design using the tools on the Form Layout and Form Design tabs.
- If you choose Split Form, Access will create a form that displays a single record in a form view and multiple records in a datasheet view. You can modify the form layout and design using the tools on the Form Layout and Form Design tabs.

To save the form, click the Save button on the Quick Access Toolbar or press Ctrl + S. Enter a name for the form and click OK. You will see the form in the Navigation Pane.

How to Create Reports

You can create reports to summarize and display your data professionally and attractively. Reports are like documents that show your data in a formatted and printed layout. You can use different sections, groups, sorts,

totals, charts, or graphics to enhance your reports. You can also customize your reports by using report properties, events, and macros.

To create a report, follow these steps:

- Click on the Create tab and choose the type of report that you want to create, such as Report, Report Design, Blank Report, Report Wizard, or Labels.
- If you choose Report, Access will create a report based on the table or query you selected or opened. You can modify the report layout and design using the tools on the Report Layout and Report Design tabs.
- Access will open a blank report in Design View if you choose Report Design. You can add the tables or queries you want to use as the data source by clicking Property Sheet and choosing them from the Record Source drop-down list. You can also add fields to the report by dragging them from the Field List to the report. You can also add controls to the report using the Design tab.
- Access will open a blank report in Layout View if you choose Blank Report. You can add fields to the report by dragging them from the Field List to the report. You can also add controls to the report using the Design tab tools.
- If you choose Report Wizard, Access will guide you through creating a report based on your choices. You can select the fields, grouping levels, sorting order, layout, style, and title for your report. You can also preview the report before finishing the wizard.
- If you choose Labels, Access will help you create labels for your data, such as mailing labels, name tags, or stickers. You can select the label type, size, font, and alignment. You can also preview the labels before finishing the wizard.

To save the report, click the Save button on the Quick Access Toolbar or press Ctrl + S. Enter a name for the report and click OK. You will see the report in the Navigation Pane.

Chapter Four

Microsoft PowerPoint

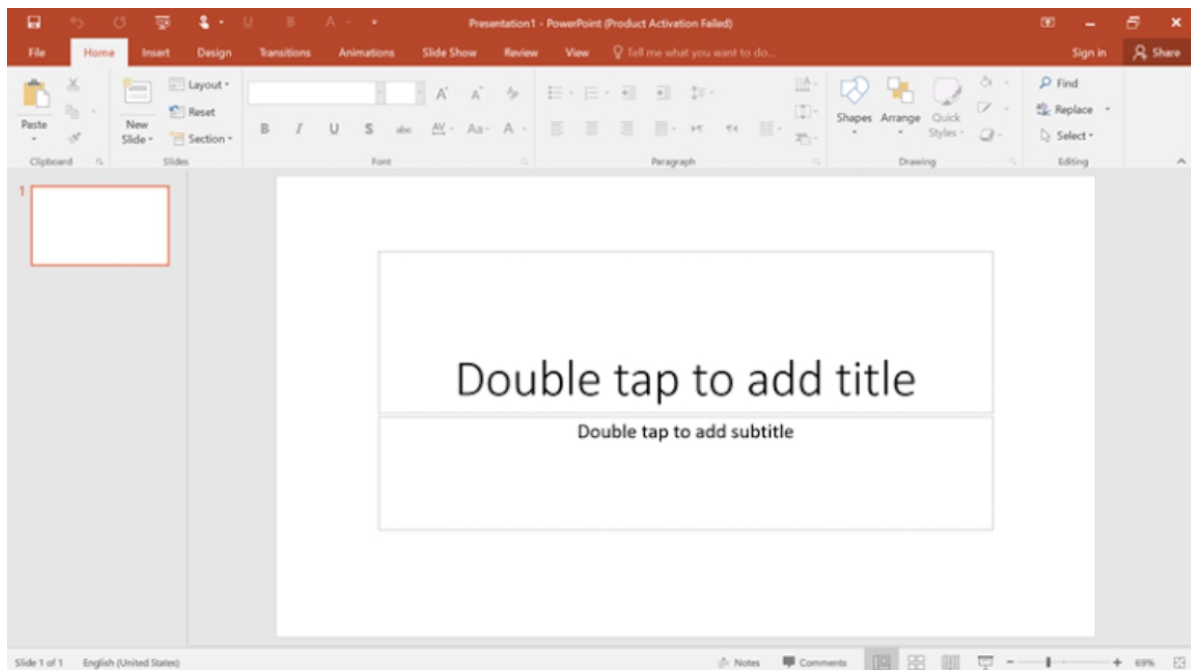

PowerPoint is a presentation software that allows you to create and deliver slideshows, animations, videos, and more. You can use PowerPoint to

communicate ideas, showcase data, or tell a story. Here are some steps to get started with PowerPoint:

Creating a New Presentation

- To create a new presentation, select File> New and choose a blank presentation or a template that suits your needs. You can also use the Design Ideas feature to get suggestions for layouts and styles based on your content.
- To add slides, select Home> New Slide and choose a layout from the gallery. You can also reorder, duplicate, or delete slides from the Slides pane on the left side of the screen.
- Select a placeholder on the slide to add text and type your content. You can format your text using the tools on the Home tab, such as font, size, color, alignment, and more.

The PowerPoint Interface

But before you start designing your slides, you must familiarize yourself with the PowerPoint interface. The interface is the main area where you can

access all the features and options of the program.

The components of the interface include:

1. The Start Screen

You will see the Start Screen when you open PowerPoint for the first time. You can create a new presentation, choose a template, or open a recent file.

2. The Ribbon

The Ribbon is the long horizontal bar at the top of the PowerPoint window. It contains various tabs like Home, Insert, Design, Transitions, Animations, and more. Each tab has different groups of commands that are related to a specific task. For example, the Home tab has Clipboard, Slides, Font, Paragraph, Drawing, and Editing groups.

Some groups have a small arrow in the bottom-right corner called the dialog launcher. Clicking on it will open a dialog box with more options for that group.

You can customize the Ribbon by adding or removing tabs, groups, and commands. To do this, right-click on any tab and select Customize the Ribbon. You can also minimize the Ribbon by clicking the arrow in the upper-right corner, next to the question mark icon.

3. The Quick Access Toolbar

The Quick Access Toolbar is a small toolbar above the Ribbon. It has some of the most commonly used commands, such as Save, Undo, Redo, and Start Slide Show. You can add more commands to the Quick Access Toolbar by clicking the drop-down arrow and selecting the ones you want.

4. The Slide Pane

The Slide Pane is the large area in the center of the PowerPoint window. It shows a preview of the selected slide, where you can edit the content and

format the objects. You can also add animations, transitions, and other effects to your slide from the Ribbon.

5. The Thumbnails Pane

The Thumbnails Pane is the vertical strip on the left side of the PowerPoint window. It shows a miniature version of each slide in your presentation, numbered in the order they appear. You can use the Thumbnails Pane to navigate, rearrange, add, delete, duplicate, or hide slides.

6. The Notes Pane

The Notes Pane is the area below the Slide Pane. It holds notes for the presenter to read while delivering the presentation. You can type your notes in the Notes Pane or use the Notes Page View to see a larger version of the notes and the slide.

7. The Status Bar

The Status Bar is the horizontal bar at the bottom of the PowerPoint window. It displays information about the presentation, such as the slide number, the zoom level, the theme name, and the spelling and grammar status. It also has buttons to switch between different views, such as Normal, Slide Sorter, Reading View, and Slide Show.

Formatting your Presentation

- Select the Insert tab to add pictures, shapes, icons, or other objects, and choose what you want to insert. You can resize, rotate, crop, or format your objects using the tools on the Format tab that appear when selecting an object.
- To add animation, video, or audio, select the Animations tab and choose an effect from the gallery. You can also adjust the animation's timing, duration, and trigger using the Animation Pane. Select the Insert tab and choose Video or Audio to insert a video or audio file. You can also trim, loop, or mute your media using the tools on the Playback tab that appears when you select a media file.

- Select the Slide Show tab to present your slideshow and choose From Beginning or From Current Slide. You can also use the Presenter View to see your notes, a timer, and a preview of the next slide. To add captions or subtitles to your presentation, select the Subtitle Settings button and choose the language and position of the subtitles.
- To share your presentation with others, select the Share button on the top right corner of the window. You can invite others to view or edit your presentation online or save it as a PDF, video, or other file format.

PowerPoint Shortcuts

Below are useful shortcuts for PowerPoint and how to use them in different scenarios.

- Create a new presentation: Ctrl+N
- Open an existing presentation: Ctrl+O
- Save a presentation: Ctrl+S
- Close a presentation: Ctrl+W or Ctrl+F4
- Cut selected text, object, or slide: Ctrl+X
- Copy selected text, object, or slide: Ctrl+C
- Paste cut or copied text, object, or slide: Ctrl+V
- Undo the last action: Ctrl+Z
- Redo the last action: Ctrl+Y
- Insert a hyperlink: Ctrl+K
- Insert a new comment: Ctrl+Alt+M
- Start a presentation from the beginning: F5
- Start a presentation from the current slide: Shift+F5
- End the presentation: Esc
- Perform the next animation or advance to the next slide: N, Enter, Page down, Right arrow key, Down arrow key, or Spacebar

- Perform the previous animation or return to the previous slide : P, Page up, Left arrow key, Up arrow key, or Backspace
- Display a blank black slide, or return to the presentation from a blank black slide: B or Period (.)
- Display a blank white slide, or return to the presentation from a blank white slide: W or Comma (,)
- Hide the pointer and navigation buttons: Ctrl+H
- Zoom in : Ctrl+Plus sign (+)
- Zoom out : Ctrl+Minus sign (-)
- Zoom to fit: Ctrl+Alt+O
- Open the Font dialog box: Ctrl+T
- Apply bold formatting to the selected text: Ctrl+B :

You can use the following shortcuts to create, edit, and organize your slides in PowerPoint.

- Insert a new slide: Ctrl+M
- Duplicate the selected slide: Ctrl+D
- Delete the selected slide: Delete
- Move the selected slide up: Ctrl+Up arrow key
- Move the selected slide down: Ctrl+Down arrow key
- Go to the next slide: Page down
- Go to the previous slide: Page up
- Go to a specific slide number: Type the slide number and press Enter
- Switch between Normal view, Slide Sorter view, and Slide Show view: F6
- Switch between Outline and Slide panes: Ctrl+Shift+Tab

You can use the following shortcuts to insert, format, and manipulate objects and text in your slides.

- Select all objects or text: Ctrl+A

- Group the selected objects: Ctrl+G
- Ungroup the selected group: Ctrl+Shift+G
- Align the selected objects to the left: Ctrl+L
- Align the selected objects to the center: Ctrl+E
- Align the selected objects to the right: Ctrl+R
- Align the selected objects to the top: Ctrl+Shift+T
- Align the selected objects to the middle: Ctrl+Shift+M
- Align the selected objects to the bottom: Ctrl+Shift+B
- Distribute the selected objects horizontally: Ctrl+Shift+H
- Distribute the selected objects vertically: Ctrl+Shift+V
- Rotate the selected object to the right: Alt+Right arrow key
- Rotate the selected object to the left: Alt+Left arrow key
- Flip the selected object horizontally: Ctrl+H
- Flip the selected object vertically: Ctrl+V
- Increase the font size of the selected text: Ctrl+Shift+>
- Decrease the font size of the selected text: Ctrl+Shift+<
- Change the font color of the selected text: Ctrl+Shift+C
- Change the fill color of the selected object: Ctrl+Shift+F
- Change the outline color of the selected object: Ctrl+Shift+O
- Apply or remove italic formatting to the selected text: Ctrl+I
- Apply or remove underline formatting to the selected text: Ctrl+U
- Apply or remove strikethrough formatting to the selected text: Ctrl+Shift+X
- Copy the formatting of the selected object or text: Ctrl+Shift+C
- Paste the formatting to another object or text: Ctrl+Shift+V
- Insert a picture: Alt+N, P
- Insert a shape: Alt+N, SH
- Insert a text box: Alt+N, X
- Insert a SmartArt graphic: Alt+N, M
- Insert a chart: Alt+N, C
- Insert a table: Alt+N, T
- Insert an equation: Alt+N, E

- Insert a symbol : Alt+N, U
- Insert a header or footer: Alt+N, H

You can use the following shortcuts to control your slide show during the presentation.

- Start the presentation in Presenter View: Alt+F5
- Pause or resume the presentation: S or Plus sign (+)
- Go to the next slide without playing the transition: Shift+Enter.
- Go to the previous slide without playing the transition: Shift+Backspace
- Go to the first or last slide: Home or End
- Display the context menu: Shift+F10.
- Display the shortcut menu: Ctrl+Shift+F10.
- Display the All Slides dialog box: Ctrl+S.
- Display the Speaker Notes: Ctrl+H
- Display the Slide Show Help dialog box: F1
- Switch to the pen, eraser, or highlighter tool: Ctrl+P, Ctrl+E, or Ctrl+I
- Change the pen color: Ctrl+Shift+P
- Erase the annotations: E
- Hide or show the ink annotations: Ctrl+M
- Use the laser pointer: Ctrl+L
- Use the magnifier: Ctrl+Alt+M
- Exit the magnifier: Esc
- Switch between the magnifier and the pointer: Ctrl+M
- Switch between the windowed and full-screen mode: Alt+Enter
- Switch to a different program: Alt+Tab

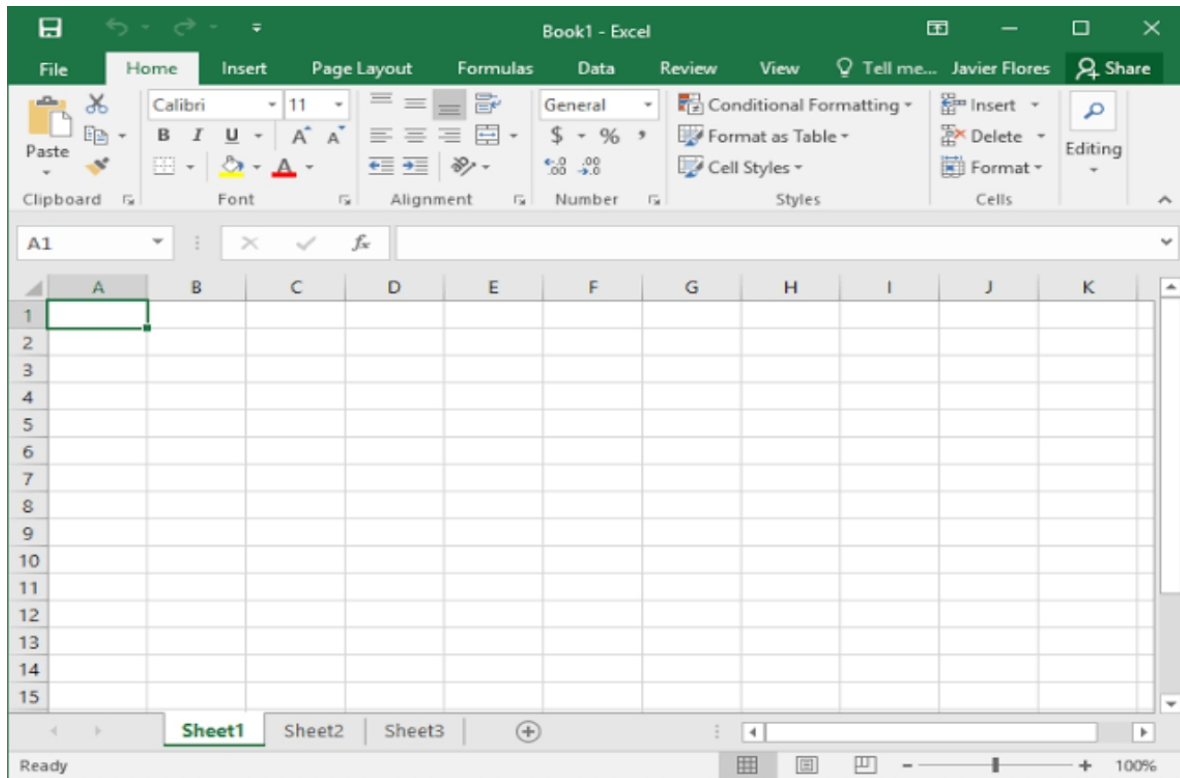

Chapter Five

Microsoft Excel

Microsoft Excel helps you perform various tasks with data. Excel can help you perform various tasks, such as budgeting, forecasting, reporting, charting, etc.

The Microsoft Excel Interface

1. The Ribbon

The Ribbon is the Home for all commands and menus in Excel. It is located at the top of the Excel window and consists of several tabs, each containing a group of related commands. For example, the Home tab contains commands for formatting, editing, and copying cells; the Insert tab contains commands for inserting charts, tables, and pictures; the Formulas tab contains commands for creating and managing formulas and functions; and so on.

You can customize the Ribbon by adding or removing tabs, groups, and commands according to your preferences and needs. To do this, right-click on any tab and select Customize the Ribbon. In the dialog box, you can check or uncheck the tabs, groups, and commands you want to show or hide on the Ribbon. You can also create your tabs and groups and add commands from the list on the right.

2. The Formula Bar

The formula bar allows you to enter and edit information in a cell. It is located below the Ribbon and above the worksheet. The formula bar displays the cursor's current location, the cell's name or range, and the value or formula of the cell. For example, if you select cell A1 and type 10, the formula bar will show A1 | 10.

You can use the formula bar to enter simple or complex formulas, functions, and references in a cell. A formula is an expression that calculates a value based on the values in other cells. A function is a predefined formula that performs a specific calculation or operation. A reference refers to a cell or a range of cells by using their names or addresses. For example, if you want to calculate the sum of the values in cells B1 to B10, you can enter the formula =SUM(B1:B10) in the formula bar.

Some of the most commonly used functions in Excel are:

- **SUM:** Calculates the sum of a group of values
- **AVERAGE:** Calculates the average of a group of values
- **IF:** Tests a condition and returns one value if true and another value if false
- **VLOOKUP:** Looks up a value in a table and returns a corresponding value from another column
 - **COUNTIF:** Counts the number of cells that meet a specific criterion

3. The Worksheet

The worksheet is the main work area in Excel, where you can enter and manipulate data. It comprises cells displayed in a grid created by the intersection of rows and columns. Each cell can contain a value, a formula, a function, or a reference. You can identify a cell by its address, which consists of the column letter and the row number. For example, the cell in the top-left corner of the worksheet is called A1.

You can select, format, Copy, move, delete, and sort cells, rows, and columns in a worksheet. To select a cell, click on it. To select a range of cells, drag the mouse over them or use the Shift and arrow keys. To format

a cell or a range of cells, use the commands on the Home tab, such as fonts, colors, borders, alignment, and number formats. To copy or move a cell or a range of cells, use the Cut, Copy, and Paste commands on the Home tab or the right-click menu. To delete a cell or a range of cells, use the Delete command on the Home tab or the right-click menu. To sort a range of cells, use the Sort command on the Data tab or the right-click menu.

4. The Status Bar

The status bar is where you can see useful information about your workbook, such as the current status, the number of sheets, the zoom level, and the view options. It is located at the bottom of the Excel window and consists of several icons and indicators. For example, the Ready indicator shows that Excel is ready to accept your input, the Sheet indicator shows the name and number of the active sheet, the Zoom slider allows you to adjust the magnification of the worksheet, and the View buttons allow you to switch between different views, such as Normal, Page Layout, and Page Break Preview.

The status bar can also display information about the current selection, such as the selected cells' sum, average, count, minimum, and maximum. To customize the status bar, right-click on it, check or uncheck the information, and view the options you want to show or hide.

Worksheet Actions

- 1. Create or open a workbook:** A workbook is an Excel file containing one or more worksheets and tabs that store your data. Click Blank Workbook on the Excel home screen to create a new workbook. To open an existing workbook, click Open Other Workbooks and browse for the File you want.
- 2. Enter and format your data:** To enter data in a worksheet, click on a cell and type the value you want. You can use the arrow keys, the Tab key, or the mouse to move between cells. You can also copy and paste data from other sources, such as another workbook, a website, or a text file. To format your data, use the buttons on the Ribbon Home tab, which is the toolbar at the top

of the window. You can change your data's font, size, color, alignment, and style. You can apply borders, shading, and conditional formatting to make your data more readable and attractive.

3. **Use formulas and functions to perform calculations:** Excel can help you perform various calculations and operations on your data using formulas and functions. A formula is an expression that starts with an equal sign (=) and uses operators, constants, cell references, and functions to calculate a value. A function is a predefined formula that performs a specific task, such as SUM, AVERAGE, IF, VLOOKUP, and more. To enter a formula, click on a cell and type the formula you want. You can use the buttons on the Formulas tab of the Ribbon to insert functions, names, and other elements into your formulas. You can also use the AutoSum button on the Home tab to add the values in a range of cells quickly.
5. **Create and customize charts and graphs to visualize your data:** Excel can help you create and customize various charts and graphs to display your data and trends. To create a chart, select the data you want to include and click on the Insert tab of the Ribbon. You can choose from charts such as column, bar, line, pie, scatter, histogram, and more. You can also use the Recommended Charts button to see some suggestions based on your data. To customize your chart, use the buttons on the Chart Tools tabs that appear when you click on the chart. You can change the chart type, layout, style, title, legend, axes, and labels. You can also use the Format tab to change your chart elements' colors, shapes, effects, and fonts.
6. **Organize and summarize your data using tables and pivot tables:** Excel can help you organize and summarize your data using tables and pivot tables. A table is a range of data that has headers and can be formatted, sorted, filtered, and analyzed. A Pivot Table is a unique table that can aggregate and rearrange data from a source table or an external data source. To create a

table, select the data you want to include and click the Table button on the Insert tab. To create a PivotTable, click on the PivotTable button on the Insert tab and choose your PivotTable's data source and location. You can then use the fields, filters, rows, columns, and values areas to drag and drop the data you want to include in your Pivot Table. You can also use the buttons on the PivotTable Tools tabs to change your PivotTable's design, layout, and options.

7. **Save and share your workbook:** To save your workbook, click on the File tab and select Save or Save As. You can choose a location to save your Files, such as on your computer or OneDrive. You can also choose a file format like .xlsx, .csv, .pdf, and more. To share your workbook, click the Share button on the File tab. You can send your workbook as an attachment or a link via email, OneDrive, SharePoint, or Teams. You can also control the permissions and access levels of the recipients. You can also co-author and edit your workbook with others in real-time using Excel for the web, desktop, or mobile app. You can also comment and chat with others within the workbook and track the changes and history of the document.

Cell Actions

Cells are the basic units of data in Excel, where you can enter, format, calculate, and manipulate information. Cells are organized into rows and columns; each cell has a unique address based on location. Knowing how to perform different actions on cells in Excel can help you work more efficiently and effectively with your data.

1. Entering Data

One of the most essential actions on cells in Excel is entering data. You can enter data manually or automatically, depending on your needs. To enter data manually, you can:

- Select a cell or a range of cells where you want to enter data.
- Type the data using your keyboard. You can enter text, numbers, dates, times, formulas, or functions.
- Press Enter to confirm the data and move to the next cell, or press Tab to confirm the data and move to the right.

To enter data automatically, you can:

- Use the AutoFill feature to fill a series of cells with data that follows a pattern, such as dates, numbers, or text. To use AutoFill, select the cell or cells that contain the data you want to fill, drag the fill handle (the small square at the bottom right corner of the selection) to the direction and length you want, and release the mouse button.
- Use the Flash Fill feature to fill a series of cells with data that matches the pattern of another column, such as extracting names, emails, or phone numbers. To use Flash Fill, enter the data you want to fill in the first cell of the column, press Enter, and then press Ctrl + E to fill the rest of the column.
- Use the Data Validation feature to restrict the type of data entered in a cell or a range of cells, such as numbers, dates, text, or a list of values. To use Data Validation, select the cell or cells where you

want to apply the validation, go to the Data tab, click Data Validation, and choose the criteria and options you want.

2. Formatting

Another common action on cells in Excel is formatting. Formatting can change the appearance and behavior of the data in the cells, such as the font, color, alignment, number format, etc. Formatting can make your data more readable, consistent, and professional.

To format cells in Excel, you can:

- Use the formatting tools on the Home tab, such as Font, Alignment, Number, Styles, etc. To use these tools, select the cell or cells you want to format and click the tool you want. You can also use the Format Cells dialog box to access more formatting options by right-clicking the selection, choosing Format Cells, or pressing Ctrl + 1.
- Use the conditional formatting feature to apply formatting rules based on the value or condition of the cells, such as highlighting, data bars, color scales, or icons. To use conditional formatting, select the cell or cells you want to format, go to the Home tab, click Conditional Formatting, and choose the rule you want. You can also create your own rules by clicking New Rule or Manage Rules.
- Use the cell styles feature to apply a set of formatting attributes to a cell or a range of cells, such as titles, headings, data, or themes. To use cell styles, select the cell or cells you want to format, go to the Home tab, click Cell Styles, and choose the style you want. You can also create your styles by clicking New Cell Style.

3. Calculation

One common action on cells in Excel is calculation. Calculation can perform mathematical operations and analysis on the data in the cells, such as addition, subtraction, multiplication, division, average, sum, count, etc. Calculation can help you find answers, insights, and trends from your data.

To perform calculations on cells in Excel, you can:

- Use formulas to calculate the value of a cell based on the values of other cells, constants, or operators. To use formulas, select the cell where you want to enter the formula, type the equal sign (=), and then type the formula using the cell references, constants, and operators you want. You can also use the Formula Builder to help you create formulas by clicking the fx button next to the formula bar or pressing Shift + F3.
- Use functions to calculate the value of a cell based on a predefined calculation, such as SUM, AVERAGE, COUNT, IF, VLOOKUP, etc. To use functions, select the cell where you want to enter the function, type the equal sign (=), and then type the name of the function and the arguments you want. You can also use the Insert Function dialog box to help you find and insert functions by clicking the fx button next to the formula bar or pressing Shift + F3.
- Use the AutoSum feature to quickly calculate the sum of a range of cells, such as a row, a column, or a table. To use AutoSum, select the cell where you want to enter the sum, go to the Home tab, click AutoSum, and confirm the range you want to sum. You can also use other functions like AVERAGE, COUNT, MAX, or MIN by clicking the drop-down arrow next to the AutoSum button.

4. Copying, Moving, and Deleting

Another set of actions on cells in Excel is copying, moving, and deleting. Depending on your needs, these actions can help you rearrange, duplicate, or remove the data in the cells.

To copy, move, or delete cells in Excel, you can:

- Use the cut, Copy, and paste commands to move or duplicate the data from one cell or range of cells to another. To use these commands, select the cell or cells you want to cut or copy, go to the Home tab, click Cut or Copy, select the destination cell or cells, and click Paste. You can also use the keyboard shortcuts Ctrl + X, Ctrl + C, and Ctrl + V or the right-click menu to perform these commands. You can also use the Paste Special option to paste only specific aspects of the data, such as the values, the formulas, the formatting, etc.
- Use the drag-and-drop method to move or duplicate the data from one cell or range of cells to another. To use this method, select the cell or cells you want to move or copy, hover the mouse pointer over the edge of the selection until it becomes a four-headed arrow, and drag the selection to the destination cell or cells. Hold the Ctrl key while dragging the selection to copy the data instead of moving it.
- Use the delete command to remove the data from one cell or range of cells. To use this command, select the cell or cells you want to delete, go to the Home tab, click Delete, and choose the option you want. You can also use the keyboard shortcut Delete or the right-click menu to perform this command. You can also use the Clear option to clear only specific aspects of the data, such as the values, the formulas, the formatting, etc.

Chapter Six

Microsoft Outlook

Microsoft Outlook is a popular email and calendar application that can help you manage your personal and professional communication, schedule, and tasks. Whether you want to send an email, create an event, or organize your contacts, Outlook can help you do it quickly and efficiently.

Getting Started

Before you can use Outlook, you need to have an account. Here are the steps to do that:

- **Create an account:** If you don't yet have one, you can create one for free at outlook.com. Click on the Create an Account tab on the Homescreen. You will need to provide some basic information, such as your name, email address, and password. You can also choose a custom domain name for your email address, such as yourname@outlook.com.
- **Sign in:** Once you have created an account, you can sign in with your account credentials. You may need to verify your identity with a code sent to your phone or email. You can also stay signed in or sign out after each session.

Creating and Sending Email

One of the main functions of Outlook is to send and receive email messages. Here are the steps to create and send an email using Outlook:

- **Open a new message:** Do this by clicking the New Message button on the top left corner of the app. Alternatively, you can use the keyboard shortcut Ctrl+N on Windows or Command+N on MacOS.
- **Add recipients:** Type the email address of the person or people you want to send the message to in the To field. You can also add recipients in the Cc (carbon copy) or Bcc (blind carbon copy) fields if you want to send the message to multiple people without revealing their email addresses to each other. You can also select recipients from your contacts list by clicking the To button next to the field and choosing the contacts you want to add.
- **Add a subject:** Type a brief and descriptive summary of your message in the Subject field. This will help the recipient know what your message is about and decide whether to open it or not.
- **Compose your message:** Type your message's content in the email's main body. Use the formatting tools on the top of the message window to change your text's font, size, color, alignment,

and style. You can also insert emojis, symbols, tables, pictures, links, and other elements to enhance your message.

- **Add attachments:** If you want to send a file, such as a document, image, or video, along with your message, attach it by clicking the Attach button at the top of the message window. You can attach a file from your device, your OneDrive cloud storage, or other online sources. You can also drag and drop files from your device to the message window to attach them.
- **Add a signature:** If you want to add a personalized signature to your message, click the Signature button at the top of the message window. You can create and edit your signature in the signature dialog box. You can also choose to automatically add your signature to every message you send or to specific messages only.
- **Send your message:** When you are done composing your message, send it by clicking on the Send button on the top left corner of the message window. Alternatively, you can use the keyboard shortcut Ctrl+Enter on Windows or Command+Enter on MacOS.

Managing Email

Outlook also helps you organize, sort, and filter your email messages to keep your inbox clean and clutter-free. Here are some ways to manage your email using Outlook:

- **Use folders:** You can create folders to store and categorize your messages according to different criteria, such as sender, topic, or date. Create a new folder by right-clicking on any existing folder and choosing New folder. You can also rename, delete, or move folders by right-clicking on them and choosing the appropriate option. You can drag and drop messages from your inbox to any folder to which you want to move them.
- **Use categories:** Assign and use categories to label and group your messages according to different criteria, such as priority, status, or project. You can create and edit categories by clicking the Categorize button at the app's top and choosing All categories. You

can also assign a category to a message by clicking the Categorize button and choosing the category you want to apply. You can filter your messages by category by clicking the Filter button at the app's top and choosing Categorized.

- **Use rules:** Create and use rules to automate specific actions on your messages, such as moving, deleting, or forwarding them, based on certain conditions, such as sender, subject, or attachment. Create and edit the rules by clicking the Rules button at the app's top and choosing Manage Rules & alerts. You can also run a rule on a message by clicking the Rules button and choosing the rule you want to apply.
- **Use flags:** Use flags to mark and remind yourself of important messages you need to follow up on or act on. Flag a message by clicking on the Flag icon next to the message in your inbox or by right-clicking on the message and choosing Flag. You can also set a due date and a reminder for your flagged message by right-clicking on the flag icon and choosing the appropriate option. You can view your flagged messages by clicking on the Tasks button on the bottom left corner of the app and choosing Flagged items.

Contacts and Tasks

Outlook also helps you create, edit, and delete contacts and tasks to keep track of your personal and professional network and goals. Here are the steps to do that:

- **Create a contact:** You can create a new contact by clicking on the People button on the bottom left corner of the app and choosing New Contact. After doing this, enter the name, email address, phone number, and other details of the person you want to add to your contacts list. You can also add a picture, a note, or a category to your contact. Save your contact by clicking the Save & Close button in the top left corner of the contact window.
- **Edit a contact:** Edit an existing contact by clicking on the People button on the bottom left corner of the app and choosing the contact you want to edit. You can change any information or details of your contact as you wish. You can save your changes by clicking the Save & Close button on the top left corner of the contact window.
- **Delete a contact:** You can delete an existing contact by clicking on the People button on the bottom left corner of the app and choosing the contact you want to delete. Delete your contact by clicking the Delete button on the top of the app or pressing the Delete key on your keyboard. You can also restore a deleted contact by clicking on the Deleted Items folder on the left side of the app and choosing the contact you want to restore. Click on the Restore button on the top of the app or drag and drop the contact to the Contacts folder.
- **Create a task:** Create a new task by clicking the Tasks button on the bottom left corner of the app and choosing New task. Enter the name, due date, priority, and task status you want to add to your tasks list. You can also add a note, a category, or a reminder to your task. Save your task by clicking the Save & Close button in the top left corner of the task window.
- **Edit a task:** Edit an existing task by clicking on the Tasks button on the bottom left corner of the app and choosing the task you want to edit. Change any information or details of your task as you wish.

Save your changes by clicking the Save & Close button on the top left corner of the task window.

- **Delete a task:** Delete an existing task by clicking on the Tasks button on the bottom left corner of the app and choosing the task you want to delete. Then click the Delete button on the app's top or press the Delete key on your keyboard.
- **Restore a task:** You can restore a deleted task by clicking on the Deleted Items folder on the left side of the app and choosing the task you want to restore. Then click the Restore button on the app's top or drag and drop the task to the Tasks folder.

Calendar

Outlook also helps you create, edit, and delete events and appointments to effectively manage your time and schedule. Here are the steps to do that:

- **Create an event:** Create a new event by clicking the Calendar button on the bottom left corner of the app and choosing New Event. Then, enter the name, location, start and end times, and event recurrence you want to add to your calendar. You can also add a note, a category, or a reminder to your event. Save your event by clicking the Save & Close button on the top left corner of the event window.
- **Edit an event:** Edit an existing event by clicking on the Calendar button on the bottom left corner of the app and choosing the event you want to edit. You can change any information or details of your event as you wish. Save your changes by clicking the Save & Close button on the top left corner of the event window.
- **Delete an event:** Delete an existing event by clicking on the Calendar button on the bottom left corner of the app and choosing the event you want to delete. Then click the Delete button on the app's top or press the Delete key on your keyboard.
- **Restore an event:** Restore a deleted event by clicking on the Deleted Items folder on the left side of the app and choosing the event you want to restore. Then click the Restore button on the app's top or drag and drop the event to the Calendar folder.

Chapter Seven

Microsoft Teams

Microsoft Teams is a collaboration app that helps you and your team stay informed, organized, and connected. Whether working remotely, in the office, or on the go, Teams lets you chat, create teams and channels, share files, use apps, and more. Here is a brief article on how to use Microsoft Teams:

How to use Microsoft Teams

1. Sign in to Teams

To sign in to Teams, enter your Microsoft 365 username and password. You can also use your phone number or Skype ID if you have one.

2. Chat with someone or a group

Teams lets you chat with anyone in your organization, one-on-one or in a group. You can also chat with people outside your organization if they have a Teams account.

To start a chat, select Chat on the left side of the app and then click New Chat. Type the name or email address of the person or group you want to chat with. You can also add a subject line to give some context to your chat.

To send a message, type in the box at the bottom of the chat and press Enter. You can also use the formatting options to add emojis, stickers, gifs, attachments, and more.

To make a call or start a video meeting, click the audio or video icon at the top right of the chat. You can also share your screen or add more people to the chat.

3. Create a team and channels

A team is a collection of people, conversations, files, and tools related to a specific topic, project, or department. A channel is a discussion within a team dedicated to a subtopic, task, or theme.

To create a team, select Teams on the left side of the app and then click Join or Create a Team. You can choose from templates such as Class, Staff, Project, or Event. Or you can create a team from scratch.

To create a channel, go to the team you want and click More options > Add channel. You can name the channel, add a description, and choose the privacy settings. You can also create a channel from an existing chat by clicking More options > Create a channel from this chat.

4. Share files and apps

Teams lets you share files and apps with your teammates in a chat or a channel. You can upload files from your device, OneDrive, SharePoint, or

other cloud storage services. You can also use apps like Word, Excel, PowerPoint, Forms, Planner, and more.

To share a file or an app, go to the chat or channel you want and click the paperclip icon or the app icon at the bottom of the message box. You can also drag and drop files from your device or copy and paste links from the web.

To access the files and apps you have shared or received, go to the Files or Apps tab at the top of the chat or channel. You can also find them in the Files section on the left side of the app.

5. Join or schedule a meeting

Teams lets you join or schedule meetings with anyone in your organization or even outside your organization if they have a Teams account. You can also join or schedule live events, webinars, or trainings.

To join a meeting, go to the Calendar section on the left side of the app and find the meeting you want to join. You can join a meeting from a chat or a channel by clicking the Join button.

To schedule a meeting, click New Meeting in the Calendar section. You can add a title, a location, a start and end time, and a description. You can invite people, add a channel, and set a recurrence.

To start a meeting, go to the Calendar section and find your scheduled meeting. You can also start a meeting from a chat or a channel by clicking the Meet Now button.

Use the controls at the bottom of the meeting window to manage a meeting. You can mute or unmute yourself, turn your camera on or off, share your screen or content, raise your hand, chat with participants, and more.

Chapter Eight

Microsoft One Note

Microsoft OneNote is a digital notebook that lets you create, organize, and share notes across multiple devices. Whether you want to jot down ideas, plan a project, capture information, or collaborate with others, OneNote can help you do it all.

How to create and open notebooks

To use OneNote, you must sign in with a personal, work, or school account. You can sign in from the OneNote app on your Windows, Mac, iOS,

Android device or web browser.

To create a new notebook, click the + Notebook button on the app or the web. You can choose a name and a color for your notebook and select a location to save it. You can save your notebook on OneDrive, a cloud storage service that lets you access your notes from anywhere.

To open an existing notebook, click the Notebooks button on the app or the web. You will see a list of notebooks that you have created or that have been shared with you. You can also open a notebook from OneDrive by navigating to the folder where it is stored and clicking or tapping on it.

How to add and format notes

Each notebook in OneNote consists of sections, pages, and tabs. Sections are like chapters in a book, pages are like pages in a book, and tabs are like subpages within a page. You can use sections, pages, and tabs to organize your notes by topic, project, or category.

To add a new page or section to a notebook, click or tap the + Page or + Section button. You can choose a name and a color for your page or section and drag and drop it to rearrange it.

You can also insert various types of content, such as images, audio, video, links, tables, and files. To insert content, click or tap the Insert tab on the app or the web and select the type of content you want to add.

You can use styles, fonts, colors, and tags to format your notes. To format your notes, click or tap the Home tab on the app or the web and select the options you want to use.

How to share on Notes

OneNote lets you share your notes with others and collaborate on them in real-time. You can share a notebook or a page with others via email, link, or invitation. You can also edit and comment on shared notes and view the history and changes of shared notes.

To share a notebook or a page with others, click or tap the Share button on the app or the web.

Chapter Nine

Microsoft OneDrive

Microsoft OneDrive is a cloud storage service that allows you to store, access, share, and sync your files and folders across different devices. OneDrive can help you to keep your files safe, collaborate with others, and access your files from anywhere.

Compulsory, you must have a Microsoft account to use OneDrive. Create one if you don't have one, then sign in with your account.

Uploading Files

To upload files and folders to OneDrive, you can use any of the methods below:

- On a web browser, click the Upload button and select Files or Folder. Then, choose the files or folders you want to upload and click Open.

- On a desktop app, drag and drop the files or folders you want to upload to the OneDrive folder on your computer.
- On a mobile app, tap the Add button and select Upload. Then, choose the files or folders you want to upload and tap Done.

Organizing and Managing Your Files

To organize and manage your files and folders in OneDrive, you can use the following features:

- Create new folders by clicking the New button and selecting Folder. Then, enter a name for the folder and click Create.
- Rename files or folders by right-clicking them and selecting Rename. Then, enter a new name and click OK.
- Move or copy files or folders by right-clicking them and selecting Move to or Copy to. Then, choose a destination folder and click Move or Copy.
- Delete files or folders by right-clicking them and selecting Delete. Then, click Delete again to confirm.
- Sort files or folders by clicking the Sort by button and selecting criteria, such as Name, Size, or Date modified.
- Search files or folders by entering a keyword in the Search box and pressing Enter.

Sharing and Collaborating with OneDrive

OneDrive allows you to share your files and folders with others by sending a link or inviting specific people. You can also set different permissions and options for sharing, such as view, edit, and expiration. To share files or folders with OneDrive, follow these steps:

1. Select the files or folders you want to share and click the Share button.
2. Choose how you want to share:
 - To send a link, click Anyone with the link and copy the link. Then, paste the link in an email, message, or social media post and send it to the people you want to share with.
 - To invite specific people, click Specific people and enter their email addresses. Then, click Send.
3. To change the permissions and options for sharing, click the More options button and select the settings you want. For example, you can:
 - Allow or prevent editing by checking or unchecking the Allow editing box.
 - Set an expiration date by clicking the Set expiration link and choosing a date.
 - Require a password by clicking the Set password link and entering a password.
 - Remove access by clicking the Manage access link and the X icon next to the person or link you want to remove.

OneDrive also allows you to collaborate with others on your files and folders, using features such as comments, version history, and co-authoring. To collaborate with OneDrive, use the following features:

- Add comments to files or folders by right-clicking them and selecting Comment. Then, enter your comment and click Post. You can also reply to or delete comments by clicking the Reply or Delete buttons.
- View the version history of files or folders by right-clicking them and selecting Version history. Then, you can see the changes made by different users, restore a previous version, or delete a version by clicking the Restore or Delete buttons.

- Co-author files or folders by opening them in the online or desktop versions of Microsoft Office apps, such as Word, Excel, or PowerPoint. Then, you can see the changes made by other users in real-time, chat with them, or save the file to OneDrive.

Syncing and Backing Up with OneDrive

OneDrive allows you to sync your files and folders between OneDrive and your local devices to access them offline and keep them updated. To sync files and folders with OneDrive, you need to use the OneDrive desktop app. To sync files and folders with OneDrive, follow these steps:

1. Open the OneDrive app and sign in with your Microsoft account.
2. Click the OneDrive icon in the taskbar and select Settings.
3. Click the Account tab and click the Choose Folders button.
4. Select the files and folders you want to sync and click OK.
5. To change the sync settings, click the Network tab and adjust the settings you want. For example, you can:
 - Limit the upload or download speed by moving the sliders.
 - Pause or resume syncing by clicking the Pause syncing or Resume syncing buttons.
 - Choose how to handle files or folders that are deleted or renamed by clicking the Confirm deletions or Confirm renames buttons.

OneDrive also allows you to backup your files and folders to OneDrive using features such as File History and Personal Vault. To backup files and folders with OneDrive, use the following features:

1. File History: This feature allows you to backup your files and folders from your Windows PC to OneDrive. To use File History, follow these steps:

- Open the Settings app on your PC and click Update & Security.
- Click the Backup tab and click the Add a Drive button.
- Select OneDrive as the drive and click OK.
- Turn on the Automatically back up my files switch and click the More Options link.

- Choose the files and folders you want to backup and how often you want to backup by clicking the Add a folder or Back up my files buttons.

2. Personal Vault: This feature allows you to backup your files and folders to a secure and encrypted folder in OneDrive. To use Personal Vault, follow these steps:

- Open OneDrive on your device and sign in with your Microsoft account.
- Click the Personal Vault folder and click the Unlock button.
- Verify your identity using a password, PIN, or fingerprint.
- Drag and drop the files or folders you want to backup to the Personal Vault folder.
- Lock the Personal Vault folder by clicking the Lock button.

OneDrive also allows you to restore your files and folders from OneDrive using features such as Recycle Bin and Restore your OneDrive. To restore files and folders with OneDrive, use the following features:

1. Recycle Bin: This feature allows you to restore the files and folders you deleted from OneDrive. To use Recycle Bin, follow these steps:

- Open OneDrive on your device and sign in with your Microsoft account.
- Click the Recycle Bin folder and select the files or folders you want to restore.
- Click the Restore button and click OK.

2. Restore your OneDrive: This feature allows you to restore your files and folders to a previous state in case of accidental changes or deletion. To use Restore your OneDrive, follow these steps:

- Open OneDrive on your device and sign in with your Microsoft account.
- Click the Settings button and select Options.
- Click the Restore your OneDrive link and choose a date and time to restore.
- Click the Restore button and click OK.

Chapter Ten

Microsoft Publisher

Microsoft Publisher is a desktop publishing software that lets you create and share professional-quality publications for print, online, or email. Whether you want to create a newsletter, a brochure, a postcard, or a flyer, Publisher has the tools and templates you need to get started quickly and easily.

How to use Publisher's pre-designed templates to create publications

One of the easiest ways to create publications with Publisher is to use its pre-designed templates. Here are the steps to use Publisher's templates:

- Open Publisher and click on the File tab.
- Click on New and browse the categories of templates available. You can also search for a specific template by typing a keyword in the Search for online templates box.
- Select the template that you want to use and click on Create. The template will open in Publisher with placeholder text and pictures you can replace with your content.
- To edit the text, click on the text box and type your text. You can also change the font, size, color, and style of the text using the Home tab.
- To edit the pictures, click on the picture and use the Picture Tools tab to crop, resize, rotate, or apply effects to the picture. You can also replace the picture with your picture by right-clicking on the picture and selecting Change Picture.
- To add more elements to your publication, such as shapes, borders, or calendars, use the Insert tab and select the element you want to insert. You can also use the Design tab to change your publication's color scheme, font scheme, or page background.
- To preview your publication, click on the File tab and select Print. You can also use the Zoom slider or the Page Navigation pane to view different parts of your publication.

How to precisely layout and style text, pictures, borders, calendars, and more

Publisher gives you a lot of control over the layout and style of your publications. You can use the following tools and options to adjust your elements precisely:

- The rulers, gridlines, and guides help you align and position your elements on the page. You can show or hide them by clicking on the View tab and checking or unchecking the Ruler, Gridlines, or Guides boxes. You can also customize the settings of the rulers, gridlines, and guides by clicking on the Page Design tab and selecting Layout.
- The align, distribute, group, and rotate tools help you arrange and manipulate your elements on the page. You can access them by selecting the elements you want to adjust and clicking the Format tab. You can also use the Arrange group to change your elements' order, alignment, or rotation.
- The size and position tools help you change the dimensions and location of your elements on the page. You can access them by selecting the elements you want to adjust and clicking the Format tab. You can also use the Size and Position dialog boxes to enter the exact values for your elements' width, height, and position.
- The margin, column, and row tools help you change the spacing and layout of your text and tables on the page. You can access them by selecting the text box or table you want to adjust and clicking the Format tab. You can also use the Margins, Columns, and Rows dialog boxes to enter the exact values for your text and tables' margin, column, and row settings.

How to publish your publications

Publisher gives you a flexible publishing option to choose the best format for your audience, whether print, online, or email. Here are the steps to publish your publications:

- Click on the File tab and select Export.
- Choose the format that you want to use for your publication. You can use either PDF/XPS, E-mail, HTML, or Pack and Go.
- Click on Create or Save to publish your publication in the format that you have chosen.

How to use Publisher's sharing features

Publisher also has some sharing features that require OneDrive, OneDrive for Business, or SharePoint, which are cloud-based services that let you store and access your files online.

To use these features, you must have a Microsoft account and sign in to Publisher. You also need to subscribe to OneDrive, OneDrive for Business, or SharePoint or use the free versions of these services with limited storage and functionality.

You can access these features by clicking the File tab and selecting Save, Share, or Present Online.

Chapter Eleven

Microsoft Visio

Microsoft Visio is a diagramming app that you can use to create flow charts, network diagrams, floor plans, and much more. Whether you need to visualize a process, a system, a space, or a data set, Visio can help you turn complex information into clear and engaging diagrams.

Choosing a template and a stencil

A template is a pre-designed diagram that you can customize to fit your needs. A stencil is a collection of shapes you can drag and drop onto your diagram. Visio has hundreds of templates and stencils for different diagrams, such as business, engineering, education, and more. You can browse and search for templates and stencils in the File tab under New.

To choose a template and a stencil, follow these steps:

- Click the File tab and select New.
- Browse or search for the template you want and click on it.
- Select the stencil you want and click Create.

Creating and editing diagrams

Once you have chosen a template and a stencil, you can start creating and editing your diagram. You can drag and drop shapes onto the canvas, connect them with connectors, and add text, colors, styles, themes, and variants to make your diagram more attractive and informative. You can also use alignment, spacing, containers, and layers to organize and format your diagram. You can also insert pictures, icons, charts, and other objects to enhance your diagram.

Dragging and dropping shapes

Shapes are the essential elements of your diagram. You can drag and drop shapes from the stencil onto the canvas and resize, rotate, and move them as you like. You can also copy, paste, duplicate, and delete shapes.

To drag and drop shapes, follow these steps:

- Select the shape you want from the stencil and drag it onto the canvas.
- Release the mouse button to drop the shape.
- To resize the shape, drag the handles on the sides or corners of the shape.
- To rotate the shape, drag the green handle on the top of the shape.
- To move the shape, drag it to a new location on the canvas.

Connecting shapes with connectors

Connectors are lines that link shapes together and show the relationship between them. You can use different connectors, such as straight, curved, or angled, and add arrows, labels, and colors. You can also use dynamic connectors that adjust automatically when you move the shapes.

To connect shapes with connectors, follow these steps:

- Select the connector tool from the Home tab under Tools.
- Click on the first shape you want to connect and drag the connector to the second shape.
- Release the mouse button to connect the shapes.

- To change the connector type, right-click on the connector and select Connector Types.
- To add arrows, labels, or colors to the connector, use the Home tab options under Shape Styles.

Adding text, colors, styles, themes, and variants

You can add text to your shapes and connectors to provide more information and clarity to your diagram. You can also change the colors, styles, themes, and variants of your shapes and connectors to make your diagram more appealing and consistent.

To add text, follow these steps:

- Select the shape or connector to which you want to add text and double-click on it.
- Type the text you want and press Enter.
- To format the text, use the options on the Home tab under Font.

To change the colors, styles, themes, and variants, follow these steps:

- Select the shape or connector you want to change or press Ctrl+A to select all.
- To change the color, use the Fill and Outline options on the Home tab under Shape Styles.
- Use the Quick Styles option on the Home tab under Shape Styles to change the style.
- To change the theme, use the Themes option on the Design tab under Themes.
- To change the variant, use the Variants option under the Design tab.

Using alignment, spacing, containers, and layers

You can use alignment, spacing, containers, and layers to organize and format your diagram. Alignment and spacing help you arrange your shapes and connectors neatly and orderly. Containers help you group and label

related shapes and connectors. Layers help you manage the visibility and order of your shapes and connectors.

To use alignment and spacing, follow these steps:

- Select the shapes and connectors you want to align and space them or press Ctrl+A to select all.
- To align the shapes and connectors, use the Align option on the Home tab under Arrange.
- To space the shapes and connectors, use the Position option on the Home tab under Arrange.

To use containers, follow these steps:

- Select the shapes and connectors you want to group and label or press Ctrl+A to select all.
- Use the Container option on the Insert tab under Diagram Parts to add a container.
- To change the style of the container, use the Quick Styles option on the Home tab under Shape Styles.
- To add a label to the container, double-click on the container and type the text you want.

To use layers, follow these steps:

- Use the Layer Properties option on the Home tab under Editing to add a layer.
- To assign shapes and connectors to a layer, select them and use the Assign to Layer option on the Home tab under Editing.
- To manage the visibility and order of the layers, use the Layer Settings option on the Home tab under Editing.

Inserting pictures, icons, charts, and other objects

You can insert pictures, icons, charts, and other objects to enhance your diagram. Pictures and icons can add visual interest and context to your diagram. Charts can show data and trends related to your diagram. Other

objects, such as hyperlinks, comments, and shapes from other stencils, can add more functionality and interactivity to your diagram.

To insert pictures, icons, charts, and other objects, follow these steps:

- Use the Pictures option on the Insert tab under Illustrations to insert a picture.
- Use the Icons option on the Insert tab under Illustrations to insert an icon.
- Use the Chart option on the Insert tab under Illustrations to insert a chart.
- To insert other objects, use the options on the Insert tab under Links, Comments, and Add-Ons.

Saving, exporting, and printing diagrams

You can save your diagram as a Visio file (.vsdx) or another file type, such as PDF, PNG, or SVG. You can export your diagram as a web page (.htm) or data (.csv). You can also print your diagram on paper or as a PDF.

To save, export, and print diagrams, follow these steps:

- Use the Save or Save As option on the File tab under Save to save your diagram.
- To export your diagram, use the Export option on the File tab under Export.
- Use the Print option on the File tab under Print to print your diagram.

Sharing and co-authoring diagrams

You can share your diagram via email, OneDrive, Teams, or SharePoint. You can also co-author and comment on diagrams with others. Sharing and co-authoring diagrams can help you collaborate and communicate more effectively with your team.

To share and co-author diagrams, follow these steps:

- To share your diagram via email, use the Share option on the File tab under Share.
- To share your diagram via OneDrive, Teams, or SharePoint, use the Save to Cloud option on the File tab under Save.
- To co-author and comment on diagrams with others, use the Co-authoring and Comments options on the Review tab under Collaboration.

Displaying diagrams

You can display your diagram in presentation mode or Visio Viewer. Presentation mode allows you to show your diagram in full screen, with zooming and panning features. Visio Viewer allows you to view your diagram in a web browser without installing Visio.

To display diagrams, follow these steps:

- Use the Presentation Mode option on the View tab under Show to display your diagram in presentation mode.
- To display your diagram in Visio Viewer, use the Open in Visio Viewer option on the File tab under Open.

Chapter Twelve

Microsoft Sharepoint

Microsoft SharePoint is a platform that allows you to create websites, manage content, collaborate with others, and leverage collective knowledge.

Sign in to SharePoint

You must sign in to your Microsoft 365 account or your organization's SharePoint Server site to access SharePoint. You can use any web browser, such as Microsoft Edge, Internet Explorer, Google Chrome, or Mozilla Firefox. Once you sign in, you will see the SharePoint start page, where you can access your existing sites, create new sites, or search for content and people.

Create or join a site

To create a site, click Create site on the SharePoint start page, and choose either Team site or Communication site. A team site is a collaborative space where you can work with others on files and apps, while a communication site is a showcase space where you can broadcast information to a large audience.

Alternatively, you can join a site someone else has created and invited you to. You will receive an email invitation with a link to the site. You can also find and follow sites that interest you on the SharePoint start page under the Following or Frequent tabs.

Customize your site

Once you have a site, you can customize it to suit your needs and preferences. You can change the look and feel of your site by choosing a theme, a logo, and a layout. You can also add, remove, or rearrange web parts, which are the building blocks of your site. Web parts allow you to display different types of content, such as text, images, videos, documents, lists, calendars, charts, and more.

To edit your site, click Edit on the top right corner and use the toolbox on the left to add or modify web parts. You can also drag and drop web parts to rearrange them on your site.

Add and manage content

One of the main benefits of SharePoint is that you can store and manage your content in a centralized and secure location. You can upload, download, edit, share, and sync files and folders in your site's document library, a web page displaying your documents. You can also create and manage lists and web parts that store and display data in rows and columns.

Lists can help you track tasks, issues, contacts, events, etc. To add content to your site, click New on the top left corner and choose either File, Folder, List, Page, or App. To manage your content, select the item you want to work on and use the command bar or the ellipses (...) menu to perform actions like open, edit, share, delete, or move.

Conclusion

Microsoft 365 apps are more than just productivity tools. They are integrated apps and services that let you create, collaborate, and share your best work across devices and platforms. Whether you need to work from home, connect with your team, or learn remotely, Microsoft 365 has a plan that suits your needs. You can also enjoy the benefits of cloud storage, security, and support with Microsoft 365.

With Microsoft 365, you can access the latest Word, Excel, PowerPoint, Outlook, and more versions, as well as new apps and features that enhance your creativity and productivity. Microsoft 365 is the ultimate solution for your personal and professional needs. Try it for free today, or upgrade to a premium plan to unlock more benefits. Microsoft 365 is the future of work. Are you ready to join it?

Your gateway to knowledge and culture. Accessible for everyone.
